Preface to the Second Edition v
Preface to the First Edition vii
Acknowledgments ix
Contributors xix

1. PRINCIPLES OF ENERGY CONVERSION **1**
1.1 GENERAL BACKGROUND 2
1.2 MAGNETIC MATERIALS 4
1.2.1 Properties of Ferromagnetic Materials 5
1.2.2 Boundary Conditions for $\bar{B}$ and $\bar{H}$ 6
1.3 SOME BASIC FUNCTIONS RELATED TO ELECTROMAGNETIC FIELDS 6
1.3.1 Scalar Potential 7
1.3.2 Vector Potential 7
1.3.3 Electromagnetic Induction 8
1.3.4 Energy in an Electromagnetic Field 8
1.3.5 Self-Inductance and Mutual Inductance 8
1.3.6 Energy Stored in Current-Carrying Coil 9
1.4 MAGNETIC CIRCUITS 9
1.4.1 Concept of a Magnetic Circuit 9
1.4.2 Two-Dimensional Field Problems 12
1.5 FINITE ELEMENT ANALYSIS OF MAGNETIC FIELDS 15
1.5.1 Motivation 15
1.5.2 Energy Functionals 15
1.5.3 Finite Element Formulation 16
1.5.4 Boundary Conditions 17
1.5.5 Solution Techniques 17
1.5.6 Parameters from Fields 19
1.5.7 Applications in Two and Three Dimensions 19
1.5.8 Finite Elements Compute Equivalent Circuit Parameters 19
1.5.9 Finite Elements Directly Compute Motor Performance 20
1.6 ENERGY STORED IN MAGNETICALLY COUPLED MULTIPLE-LOOP SYSTEMS 21
1.7 FORCES AND TORQUES IN THE SYSTEM 21
References 23

2. TYPES OF MOTORS AND THEIR CHARACTERISTICS **25**
2.0 INTRODUCTION 26
2.1 POLYPHASE SYNCHRONOUS MOTORS 28
2.1.1 Synchronous Machine Performance Considerations 32
2.2 INDUCTION MOTORS—POLYPHASE AND SINGLE-PHASE 35
2.2.1 General Theory and Definition of Terms Used 35
2.2.2 Classification of Motors According to Size 38
2.2.3 Power Requirements, Mechanical, and Thermal Design Considerations 38
2.2.4 Standard-Efficiency Motors vs. High-Efficiency Motors 41
2.2.5 Electrical Design Options—Polyphase 41
2.2.6 Electrical Design Options—Single-Phase 42

2.2.7 Performance on Variable-Frequency Sources 43
2.2.8 Linear Induction Motors 46
2.2.9 Doubly Fed Induction Motors 54
2.3 DIRECT-CURRENT MOTORS 58
2.3.1 Introduction 58
2.3.2 General Description 58
2.3.3 Tests 62
2.3.4 Shunt Motors 64
2.3.5 Series Motors 66
2.3.6 Compound-Wound DC Motors 68
2.3.7 Permanent Magnet Motors 68
2.3.8 Brushless DC Motors 70
2.3.9 Ironless Armature DC Motors 71
2.4 ELECTRIC TRACTION 77
2.4.1 Externally Powered Vehicles 78
2.4.2 Internal Combustion Powered Vehicles 87
2.4.3 Battery Powered Vehicles 94
2.4.4 Design Considerations 98
2.5 MOTORS FOR SPECIAL APPLICATIONS 109
2.5.1 Stepper Motors 109
2.5.2 400-Hz Motors 123
2.5.3 Deep Well Turbine Pump Motors 126
2.5.4 Submersible Motors 133
2.5.5 Solid-Rotor Induction Motors 134
2.5.6 Synchronous Reluctance Motors 142
2.5.7 Aerospace Motors 153
2.5.8 Superconducting Synchronous Motor 153
2.5.9 Universal Motors 156
2.5.10 Line-Start Synchronous Reluctance and Permanent Magnet Motors 159
2.5.11 Watthour Meters 160
References 162

3. MOTOR SELECTION 167
3.1 STANDARDS 168
3.1.1 Enclosures 168
3.1.2 Dimensions 175
3.1.3 Performance 176
3.2 CHARACTERISTICS OF DRIVEN EQUIPMENT 181
3.2.1 Inertial Torques 182
3.2.2 Viscous Friction Torque 182
3.2.3 Sticking Friction 182
3.2.4 Coulomb Friction 183
3.2.5 Fluid Loads 183
3.2.6 Unusual Load Situations 183
3.3 INITIAL MOTOR SELECTION 184
3.3.1 Steady-State Solutions 184
3.3.2 Dynamic Analysis 184
3.4 MOTOR EFFICIENCY AND ENERGY CONSIDERATIONS 185
3.4.1 Efficiency Considerations 185
3.4.2 Energy Considerations 188
3.5 PAYBACK ANALYSIS AND LIFE-CYCLE COSTING OF MOTORS AND CONTROLS 188
3.5.1 General-Purpose vs. Special Machines 189
3.6 SAFETY CONSIDERATIONS 190
3.6.1 Application Information 190
3.6.2 Installation 190
3.7 HOW TO SPECIFY A MOTOR 190
3.7.1 Scope 191
3.7.2 Codes and Standards 191
3.7.3 Service Conditions 191
3.7.4 Starting Requirements 191
3.7.5 Rating 192
3.7.6 Construction Features 193
3.7.7 Accessories 197
3.7.8 Balance and Vibration 198
3.7.9 Sound Levels 198
3.7.10 Paint 198
3.7.11 Nameplates 198
3.7.12 Performance Tests 199
3.7.13 Quality Assurance 199
3.7.14 Preparation for Shipment and Storage 199
3.7.15 Data and Drawings 200
3.8 SPECIAL APPLICATIONS 200
3.8.1 Hermetically Sealed Refrigeration Motors 200
3.8.2 Selection of DC Motors with Chopper Drives for Battery Powered Vehicles 209
References 214

4. INDUCTION MOTOR ANALYSIS AND DESIGN 215
4.0 INTRODUCTION 216
4.1 INDUCTION MOTOR FIELD ANALYSIS 219
4.1.1 Generation of the Rotating Field 219
4.1.2 Winding of the Stator 223
4.1.3 Spatial Harmonics in the Field Curve 237
4.1.4 Reactances of the Induction Motor 241
4.1.5 Radial Force Waves 245

4.1.6 Homopolar Flux and Unbalanced Magnetic Pull in the Two-Pole Induction Motor 247
4.1.7 Tangential Forces Caused by Harmonics 249
4.1.8 Components of Air Gap Flux Caused by Inverter Supplies 251
4.1.9 Switching Transients 252
4.2 ROTOR CONSTRUCTION 256
4.2.1 Introduction 256
4.2.2 Squirrel-Cage Design 257
4.2.3 Wound-Rotor Design 257
4.3 INDUCTION MOTOR EQUIVALENT CIRCUITS 258
4.3.1 Introduction 258
4.3.2 Steady-State Equivalent Circuit 258
4.3.3 Transient or Dynamic Equivalent Circuit 260
4.4 EQUIVALENT CIRCUITS FOR VARIABLE FREQUENCY 261
4.4.1 Introduction 261
4.4.2 Rotor Deep-Bar Effect 262
4.4.3 Solution of Equivalent Circuits 263
4.5 IMPORTANT DESIGN EQUATIONS 263
4.5.1 Output Equation and Main Dimensions 263
4.5.2 Design of Stator Winding 264
4.5.3 Fractional Slot Winding 265
4.5.4 Squirrel-Cage Rotor Design 265
4.6 SPECIAL INDUCTION MOTOR DESIGNS 271
4.6.1 Linear Induction Motor Design 271
4.6.2 Solid-Rotor Induction Motor Design 273
4.7 MECHANICAL DESIGN 277
4.7.1 Crawling and Cogging 277
4.7.2 Vibration and Noise 278
4.7.3 Lamination Fatigue Mechanisms 279
4.8 THERMAL DESIGN 282
4.8.1 Methods of Cooling 283
4.8.2 Design of the Ventilation Circuit 284
4.9 COMPUTER-AIDED DESIGN OF ELECTRIC MACHINES 284
4.9.1 Why We Need Computers in the Design of Electric Machines 284
4.9.2 The Nature of the Design Process 285
4.9.3 Steps Needed to Design an Electric Machine 286
4.9.4 Examples of Specialized Computer Analysis 290
4.9.5 Automation of the Design Process 292
4.10 FINITE ELEMENT ANALYSIS OF INDUCTION MOTORS 293
4.10.1 Motivation for Induction Motor Finite Element Analysis 293
4.10.2 Three-Phase Induction Motor Finite Element Analysis 293
4.10.3 Single-Phase Induction Motor Finite Element Analysis 296
References 297

5. SYNCHRONOUS MOTOR ANALYSIS AND DESIGN 299
5.0 INTRODUCTION 300
5.1 FLUX AND FLUX DISTRIBUTION 300
5.2 ARMATURE WINDINGS 300
5.2.1 Armature Inductance 301
5.2.2 Slot Leakage 301
5.2.3 Harmonics in the Flux Distribution 302
5.2.4 Effects of Inverters 302
5.3 FIELD WINDINGS 302
5.3.1 Leakage Flux 302
5.3.2 Field Winding Ampere-Turns 302
5.4 DAMPER WINDINGS 303
5.4.1 Leakage Flux 303
5.5 EQUIVALENT CIRCUITS 303
5.5.1 Steady-State Operation 303
5.5.2 V-Curves 304
5.5.3 Equivalent Circuits During Transients 304
5.5.4 Starting Equivalent Circuits 305
5.6 LINEAR SYNCHRONOUS MOTORS 305
5.6.1 Definitions, Geometries, and Principle of Operation 305
5.6.2 Topologies 306
5.6.3 Performance Calculation 313
5.6.4 Applications 317
5.7 DESIGN EQUATIONS FOR A SYNCHRONOUS MACHINE 318
5.7.1 Magnetic and Electric Loading 318
5.7.2 Main Dimensions and Stator Windings 318
5.7.3 Cylindrical Rotor Design 319
5.7.4 Salient-Pole Rotors 320
5.7.5 Field Winding Design 320
5.7.6 Full-Load Field Ampere-Turns 320
5.7.7 Machine Oscillations and the Damper Winding 321
5.8 FINITE ELEMENT ANALYSIS OF SYNCHRONOUS MOTORS 321
5.8.1 Advantages of Finite Element Analysis of Synchronous Motors 321

5.8.2 Motors with Permanent Magnet Rotors 321
5.8.3 Variable-Reluctance Stepper Motors 323
5.8.4 Axial Flux Machines 323
References 325

6. DIRECT-CURRENT MOTOR ANALYSIS AND DESIGN 327
6.0 INTRODUCTION 328
6.1 ARMATURE WINDINGS 328
6.1.1 Wave Windings 328
6.1.2 Equalizers 328
6.1.3 Lap Windings 329
6.1.4 Machines with Reduced Numbers of Slots 330
6.2 COMMUTATORS 331
6.2.1 Commutator Construction 331
6.2.2 Brushes and Holders 331
6.3 FIELD POLES AND WINDINGS 332
6.3.1 Pole Laminations 332
6.3.2 Main Field Windings 332
6.3.3 Commutating Poles and Windings 332
6.3.4 Pole Face Windings 333
6.4 EQUIVALENT CIRCUIT 334
6.4.1 Steady-State Analysis 334
6.4.2 Transient Analysis 334
6.5 DESIGN EQUATIONS 334
6.5.1 Magnetic Circuit 335
6.5.2 Saturation 335
6.5.3 Detailed Magnetic Circuit Calculations 335
6.6 DC MOTORS IN CONTROL SYSTEMS 338
6.6.1 Basic Motor Equations 338
6.6.2 Basic Mechanical Equation 339
6.6.3 Block Diagrams 340
6.6.4 Typical Motor Characteristics and Stability Considerations 341
6.6.5 Field Control 341
6.7 DC MOTORS SUPPLIED BY RECTIFIER OR CHOPPER SOURCES 343
6.7.1 List of Symbols 343
6.7.2 Analysis 343
6.7.3 Rectifier Sources 344
6.7.4 Chopper Sources 347
6.8 PERMANENT MAGNET DC MOTORS 349
6.8.1 Magnetic Materials 349
6.8.2 Design Features 351
6.8.3 Servo and Control Motors 354
6.9 FINITE ELEMENT ANALYSIS OF DC MOTORS 354
6.9.1 Advantages of FEA of DC Motors 354
6.9.2 Permanent Magnet Brush DC Motors 355
6.9.3 Magnetization of Permanent Magnets 355
6.9.4 Wound-Field Brush DC Motors 356
6.9.5 Universal Motors 356
References 364

7. TESTING FOR PERFORMANCE 365
7.0 INTRODUCTION 366
7.1 POLYPHASE INDUCTION MOTOR TESTING 366
7.1.1 Electrical Test Standards 366
7.1.2 Types of Tests 366
7.1.3 Sample Calculations 369
7.1.4 Variation in Testing 369
7.1.5 Miscellaneous Tests 371
7.2 SINGLE-PHASE INDUCTION MOTORS 371
7.2.1 Electrical Test Standards 371
7.2.2 Types of Tests 371
7.2.3 Choices of Tests 371
7.2.4 Variations Due to Uncontrolled Factors 372
7.2.5 Curve Fitting of Performance Data 373
7.2.6 Miscellaneous Tests 373
7.3 SYNCHRONOUS MOTOR TESTS 374
7.3.1 Electrical Test Standards 374
7.3.2 Types of Tests 374
7.3.3 Choices of Tests 388
7.3.4 Variations Due to Uncontrolled Factors 388
7.3.5 Curve Fitting of Performance Data 388
7.3.6 Miscellaneous Tests 390
7.4 DC MOTOR TESTS 391
7.4.1 Electrical Test Standards 391
7.4.2 Preparation for Tests 391
7.4.3 Performance Tests 392
7.4.4 Special Tests 393
7.5 HERMETICALLY SEALED REFRIGERATION MOTORS 394
7.5.1 Electrical Test Standards 394
7.5.2 Types of Tests 394
7.5.3 Choices of Tests 394
7.5.4 Variations Due to Uncontrolled Factors 396
7.5.5 Curve Fitting of Performance Data 397
7.5.6 Miscellaneous Tests 397
7.6 SPECIALTY TESTING 397
7.6.1 Induction Motor Stators 397
7.6.2 Induction Motor Rotors 398

7.6.3 Permanent Magnet Motors 400
7.7 SELECTION AND APPLICATION OF TEST EQUIPMENT 400
7.7.1 Reasons for Testing 400
7.7.2 Functional Specifications of Test Equipment 400
7.7.3 Recommended Steps in Purchasing Test Equipment 401
7.7.4 Types of Tests 401
7.7.5 Types of Data Recording Devices 401
7.7.6 Mechanical and Electrical Loading Devices 402
7.7.7 Instrumentation 403
References 404

8. MOTOR INSULATION SYSTEMS 407
8.1 INTRODUCTION 407
8.1.1 Insulation and Ratings 408
8.1.2 Influence of Insulation on Motor Efficiency 408
8.1.3 Influence of Insulation on Motor Life 408
8.1.4 Random- and Form-Wound Motors 409
8.2 RANDOM-WOUND MOTORS 410
8.2.1 Insulation System of Random-Wound Motors 410
8.2.2 Insulation Testing of Random-Wound Motors 412
8.2.3 Causes of Insulation Failure 415
8.3 FORM-WOUND MOTORS 416
8.3.1 Insulation Systems 416
8.3.2 Factors Affecting Insulation System Design 419
8.3.3 Insulation Testing 422
8.4 EFFECT OF INVERTER DRIVES ON STATOR INSULATION 427
8.4.1 Surge Voltage Environment 427
8.4.2 Distribution of Voltage Surges within Stator Windings 428
8.4.3 Mechanisms of Insulation Deterioration 429
References 429
General References 430

9. MOTOR CONTROL 431
9.0 INTRODUCTION 432
9.1 INDUCTION MOTORS 432
9.1.1 Electrical Voltage Surges 432
9.1.2 Voltage Drop During Start-up 437
9.1.3 Starting Torque Characteristics 447
9.1.4 Reduced Starting Duty Schemes 451
9.1.5 Accelerating Torque and Multispeed Applications 456
9.1.6 Starting Duty Thermal Limitations 461
9.1.7 Miscellaneous Induction Motor Starting Topics 464
9.1.8 Bus Transfer and Reclosing of Induction Machines 467
9.1.9 Induction Motor Speed Control 473
9.1.10 Induction Motor Braking 474
9.2 DIRECT-CURRENT MOTORS 475
9.2.1 DC Motor Starting 475
9.2.2 DC Motor Speed Control 477
9.2.3 Braking of Direct-Current Motors 480
9.3 GENERAL CONSIDERATIONS CONCERNING SOLID-STATE CONVERTERS AND CONTROLLERS 482
9.3.1 Converters 482
9.3.2 Controllers 483
9.4 POWER ELECTRONIC DEVICES 483
9.4.1 Diodes 484
9.4.2 Thyristors 484
9.4.3 Gate Turn-Off Thyristors 485
9.4.4 Bipolar Transistors 486
9.4.5 Metal Oxide Semiconductor Field-Effect Transistors 487
9.4.6 Insulated-Gate Bipolar Transistors 488
9.4.7 Integrated Gate-Commutated Thyristor 488
9.5 CONVERTER CIRCUITS 488
9.5.1 Rectifier Circuits 489
9.5.2 Cycloconverters 492
9.5.3 Chopper Circuits 493
9.5.4 Six-Step Inverters 493
9.5.5 Pulse-Width Modulation Inverters 495
9.5.6 Multilevel Converters 498
9.6 CONTROLLERS 498
9.7 OPEN- AND CLOSED-LOOP CONTROL OF A PERMANENT MAGNET STEPPER MOTOR 500
9.7.1 Open-Loop Operation of the Stepper Motor 501
9.7.2 Closed-Loop Control of a Stepper Motor 503
9.7.3 Experimental Results 509
References 511

10. MOTOR PROTECTION 515
Part A Overview
10.1 INTRODUCTION 516
10.2 PROTECTION AGAINST OVERLOADS 516

10.2.1 Fuses 517
10.2.2 Thermal Overload Relays 517
10.2.3 Switchgear-Type Thermal Relays 517
10.2.4 Imbedded Temperature Detectors 517
10.2.5 Microprocessor Motor Protection Relays 518
10.2.6 Damper Bar Protection 520
10.2.7 Special Current Detection 520
10.2.8 Pull-Out Protection 520
10.3 UNBALANCED VOLTAGE PROTECTION 520
10.3.1 Phase Loss Relays 521
10.3.2 Negative-Sequence Voltage Relays 521
10.3.3 Current Unbalance Relays 521
10.3.4 Microprocessor Devices 521
10.4 PROTECTION FOR INTERNAL ELECTRICAL FAILURES 521
10.4.1 Stator Insulation Failure Protection 521
10.4.2 Microprocessor Protection for Internal Faults 522
10.5 SELECTION OF SWITCHING DEVICES 522
10.5.1 Contactors 522
10.5.2 Electrically Operated Circuit Breakers 522
10.6 MECHANICAL PROTECTION 523
10.6.1 Vibration Detectors 523
10.6.2 Bearing Temperature Monitors 523
10.6.3 Microprocessor Protection 524
10.7 ACCESSORIES 524
10.7.1 Filters 524
10.7.2 Ventilation Opening Guards 524
10.7.3 Space Heaters 524
Part B Fuses and Protection Coordination
10.8 INTRODUCTION 524
10.8.1 Single-Element Fuses 525
10.8.2 Protection Coordination with Single-Element Fuses 525
10.8.3 Dual-Element Fuses 527
10.8.4 Protection Coordination with Dual-Element Fuses 528
10.8.5 Single-Phasing Protection 529
Part C Bimetallic Thermal Protectors
10.9 INTRODUCTION 532
10.9.1 Definitions 532
10.9.2 Typical Devices 533
10.9.3 Considerations in Device Selection 535
10.9.4 Selection of Bimetallic Thermal Protectors for Shaded-Pole, Permanent-Split Capacitor, and Other Slow Heat Rise Single-Phase Motors 536
10.9.5 Selection of Bimetallic Thermal Protectors for Single-Voltage Split-Phase, Capacitor-Start, Capacitor-Start/Capacitor-Run, and Other Single-Phase Motors 537
10.9.6 Selection of Bimetallic Thermal Protectors for Dual-Voltage Split-Phase, Capacitor-Start, Capacitor-Start/Capacitor-Run Single-Phase Motors 540
10.9.7 Selection of Bimetallic Thermal Protectors for Three-Phase Motors 541
10.10 TESTING AGENCY REQUIREMENTS FOR MOTOR THERMAL PROTECTORS 542
10.10.1 General 542
10.10.2 Protection Types 542
10.10.3 Test Voltages and Frequencies 542
10.10.4 Protector Calibration Ranges 543
10.10.5 Temperature Measurements 543
10.10.6 Ambient Temperature 543
10.10.7 Multispeed Motors 543
10.10.8 Motor Mountings 543
10.11 PERFORMANCE REQUIREMENTS AND TESTS 543
10.11.1 Running Heating Tests 543
10.11.2 Running Overload Tests 543
10.11.3 Locked-Rotor Tests 544
10.11.4 Locked-Rotor Endurance Test 544
10.11.5 Dielectric Tests 544
10.11.6 Limited Short-Circuit Tests 544
References 545

11. MECHANICAL CONSIDERATIONS 547
11.1 NOISE 548
11.1.1 Noises of Electromagnetic Origin 551
11.1.2 Influence of Motor Configuration and Design 554
11.1.3 Regulation of Noise: Typical Levels 555
11.1.4 Reduction of Noise Levels: Special Treatment 560
11.1.5 Experimental Investigation of Noise 561
11.2 VIBRATION 566
11.2.1 Vibration Measurement and Evaluation 568

11.2.2 Housing and Shaft Vibration 571
11.2.3 Mounting 572
11.2.4 Variable-Speed Motors 572
11.2.5 Standards 573
11.3 BALANCING THE ROTOR 575
11.3.1 Rigid Rotors 575
11.3.2 Flexible Rotors 575
11.3.3 Unbalance Quality 576
11.4 BEARINGS 576
11.4.1 Sleeve Bearings 576
11.4.2 Antifriction Bearings 591
11.5 BRUSHES 596
11.5.1 Introduction 596
11.5.2 Grade Characteristic Definitions 597
11.5.3 Specialty Brushes 601
11.5.4 Summary 602
11.6 MOTOR HANDLING, MOUNTING, AND MECHANICAL CONNECTION 602
11.6.1 Motor Handling 602
11.6.2 Motor Mounting Dimensions 603
11.6.3 Shaft Connections—Belts 610
11.6.4 Shaft Connections—Chain and Sprocket Drives and Flat Belt Drives 613
11.6.5 Shaft Connections—Couplings 613
11.6.6 Shaft Connections—Splines 614
11.6.7 Initial Operation 614
References 614

12. ENVIRONMENTAL CONSIDERATIONS 617
12.1 INTRODUCTION 618
12.2 HEAT TRANSFER 619
12.2.1 Modes of Heat Transfer 620
12.2.2 Ventilation 623
12.3 COOLING OF BASIC MOTOR TYPES 626
12.3.1 Induction Motors 626
12.3.2 Synchronous Motors 627
12.3.3 DC Motors 627
12.3.4 Special Cooling 627
12.4 ENCLOSURES 628
12.4.1 IEC Enclosures 628
12.4.2 NEMA Enclosures 628
12.5 THERMAL CIRCUITS 629
12.5.1 Steady-State Circuits 630
12.5.2 Time-Varying Circuits 632
12.5.3 Simplified Circuits 633
12.6 DUTY CYCLES 636
12.6.1 RMS Loading Analysis 636
12.6.2 Time-Constant Analysis 638
12.7 AMBIENT AND ENVIRONMENTAL EFFECTS 639
12.7.1 Ambient Temperature 640
12.7.2 Altitude 640
12.7.3 Moisture 641
12.7.4 Solid Contaminants 641
12.7.5 Chemicals 642
12.7.6 Hazardous Locations 642
12.7.7 Seismic Activity 643
12.7.8 Nuclear Plant Safety 643
12.8 POWER SYSTEM QUALITY 644
12.8.1 Parameters of Power System Quality 644
12.8.2 Adjustable Speed Drives 650
References 653

13. RELIABILITY 655
13.1 RELIABILITY OF LARGE MOTORS 656
13.1.1 Introduction 656
13.1.2 IEEE 1983–1985 Survey 656
13.1.3 Failure Rate and Downtime Data 656
13.1.4 Data on Failed Components 657
13.1.5 Causes of Failure 658
13.1.6 Comparison: 1973–1974 and 1983–1985 IEEE Surveys 659
13.1.7 Comparison: AIEE 1962 and 1983–1985 IEEE Surveys 659
13.1.8 Comparison: 1983 EPRI and 1983–1985 IEEE Surveys 660
13.2 RELIABILITY OF ANTIFRICTION BEARINGS 660
13.2.1 Failure Modes of Rolling Bearings 660
13.2.2 Damage Progression to Failure 662
13.2.3 Statistical Variation of Bearing Life 663
13.3 GUIDELINES FOR SUCCESSFUL COMMUTATION AND BRUSH OPERATION 663
13.3.1 Summary 663
13.3.2 Introduction 663
13.3.3 Acceptable Commutator Conditions 663
13.3.4 Destructive Commutator Conditions 664
13.3.5 Conclusion 669
13.3.6 Reference Note 669
13.4 MONITORING FOR SIGNS OF WEAROUT 669
13.4.1 Introduction 669
13.4.2 On-Line Tests 669
13.4.3 Off-Line Tests 670
13.4.4 Continuous (On-Line) or Periodic (Off-Line)? 672

13.5 RELIABILITY IMPACT OF ADJUSTABLE SPEED DRIVES (ASDs) ON BEARINGS 672
13.5.1 Introduction 672
13.5.2 Bearing Current Induced by Supply Voltage 673
13.5.3 An Equivalent Circuit for Bearing Displacement and EDM Currents 677
13.5.4 Methods to Mitigate Bearing Currents and Their Cost 688
13.6 RELIABILITY IMPACT OF ADJUSTABLE SPEED DRIVES (ASDs) ON INSULATION 690
References 690

14. MAINTENANCE 693
14.1 LUBRICATION 694
14.1.1 Lubrication and Maintenance of Sleeve Bearings 694
14.1.2 Lubrication and Maintenance of Antifriction Bearings 694
14.2 IMPLEMENTATION OF A RELIABILITY BASED MAINTENANCE PROGRAM 698
14.3 MAINTENANCE AND REPAIR OF COMMUTATORS 700
14.3.1 Causes of Poor Commutation 701
14.3.2 Ordering New Parts 702
14.4 BRUSH REPLACEMENT 702
14.4.1 Introduction 702
14.4.2 When to Replace Brushes 702
14.4.3 Installation of Brushes 702
14.4.4 Summary 704
14.5 MAINTENANCE AND REPAIR OF WINDINGS 704
14.5.1 Installation of New Equipment 704
14.5.2 Establishing a Maintenance Schedule 705
14.5.3 Choosing Test Equipment 705
14.5.4 Performing Preventative Maintenance 707
14.5.5 Evaluating Winding Failures 711
14.5.6 Choosing Repair Facilities 715
14.5.7 Selecting Repair Methods 716
14.5.8 Testing Repaired Windings 718
14.5.9 Evaluating Repaired Equipment 718
14.5.10 General References on Maintenance and Repair of Windings 719
14.6 CORE TESTING 719
14.6.1 Loop Test Physical Arrangement 719
14.6.2 Thermovision Monitoring During the Loop Test 720
14.6.3 Other Core Test Factors 721
14.6.4 Core Hot Spot Repairs 721
14.6.5 EL CID Test 721
